Trinity of Roses ~ Create full blown roses, viewed from the front as well as the side profile. While painting

this 'old styled' botanical spray, students are able to see the detailed, up-close demonstrations of 'wet in wet' and 'wet on dry' traditional watercolor techniques. Transparent washes and glazes are used to describe the warm dramatic colours of these roses and create the supporting leaves.

The Fountain ~ Painted roses are combined with simple garden architecture to render another design. Neadeen incorporates the roses from the first painting lesson to now embellish this charming garden landscape. The addition of the garden scene adds atmospheric depth to the composition. Learn to apply and control casual and controlled washes to achieve this effect. Watch Neadeen create the water-fountain with fun wipe out techniques.

Sun Kissed Apples ~ Techniques for leaf tufting and texture are introduced in the third lesson and a lighter value mottled background adds visual texture to create this new composition. Learn to use casual 'wet in wet' techniques to create atmospheric depth and build form while learning to create the characteristics of mature apples and leaves. This design demonstrates how bright pigments can be

balanced within a simple composition. Please see the cover of the new DVD set below.

'Wild Rhododendrons' ~ create stronger contrast between a rich, darker background and the white of the watercolor paper. In the fourth lesson of this DVD series, observe how 'charged' colour

creates the soft ruffled details of petal edges as well as the characteristics of the larger leaves. Translate and transfer techniques from one design to the next, at the same time building your watercolor skills for the future.

8 hours of watercolor instruction for everyone!!
